

Agapanthus

OUTDOOR PLANT – EASY PLANT

Type: Perennial
Sun: Full to part sun
Water: Regular, well drained soil. Low water tolerated once established.
Flowers: Blue | White | Other _____
Size: Clumps up to 3' wide by 4' tall.

This South African native has become a regular in Bay Area gardens. It is very easy to grow. A great plant for beginners. It forms clumps of daffodil-like leaves that can become very large in diameter. In summer, globes of flowers form at the tops of stalks rising above the foliage.

Agapanthus will flourish with little attention. In hot, sunny locations it may need some cover. In freezing locations it can benefit from protective mulching in winter. However, for most Bay Area gardeners, this is a set-it-and-forget-it plant.
